From the President

The Society of Thoracic Radiology hosts its 34th annual meeting March 13-16, 2016 at the Hyatt Regency Scottsdale Resort and Spa at Gainey Ranch in Scottsdale, Arizona. The program committee, headed by President-Elect Ann Leung, MD in collaboration with Educational Committee Chair Jeff Kanne, MD, has designed an outstanding, comprehensive postgraduate radiology course in cardiovascular imaging. The course will be preceded on Saturday, March 12, 2016 by a 1-day multidisciplinary symposium, “Lung Cancer Screening: Requisites for a High-Quality Program.” Developed by co-directors Deni Aberle, MD, Caroline Chiles, MD, and David Lynch, MD, the symposium is designed to facilitate the ability of attendees to successfully set up and implement a multidisciplinary screening program using a standardized, evidence-based approach.

The annual meeting course curriculum covers a broad spectrum of cardiothoracic imaging topics, including diffuse lung diseases, pulmonary infections, lung cancer screening, oncologic imaging, interventional techniques, and cardiovascular imaging, among others. Self-assessment modules (SAMs) will provide important opportunities for maintenance of certification and lifelong learning needs.

Highlights of the 2016 course include:

• An integrated educational and scientific session devoted to advances in cardiac imaging and co-sponsored by NASCI.
• The Gordon Gamsu Memorial lecture, “Radiogenomics: Next Generation Rad-Path Correlation – Principles and Applications” by Michael Kuo, MD, Associate Professor of Radiology at the University of California Los Angeles.
• The Scanlon lecture, “CT Screening: Lessons from the Canadian Trials” by Stephen Lam, MD, FRCPC, Professor of Medicine at The University of British Columbia.

The spectacular Scottsdale Resort and Spa at Gainey Ranch in Scottsdale, Arizona is framed against the majestic McDowell Mountains and offers a host of recreational activities. The resort features spacious guestrooms with private balconies, a water oasis with ten pools and sand beach, 27 holes of championship golf, an award-winning spa, tennis courts and a variety of restaurants. I look forward to seeing you at this exciting venue in Scottsdale!

Four Self-Assessment Modules (SAMs)
Certified by the American Board of Radiology.

Course Objectives
1. List basic concepts in imaging interpretation including pitfalls, anatomic variants and frequently missed diagnoses.
2. Summarize the role of imaging in the assessment of cardiac disease, including diseases of the coronary arteries and great vessels of the thorax.
3. Discuss the role of imaging in the screening, diagnosis, evaluation and management of patients with incidentally detected lung nodules.
4. Discuss the role of imaging in the diagnosis, staging evaluation and management of patients with lung cancer and other thoracic neoplasms.
5. Describe the clinical and radiological evaluation and management strategies of a solitary pulmonary nodule, including the subsolid lesion.
6. Describe current and emerging applications in radiography, computed tomography (CT), magnetic resonance (MR) imaging, and positron emission tomography (PET) as they relate to the evaluation and management of thoracic diseases.
7. Describe a practical and multi-disciplinary approach to the assessment and management of diffuse lung diseases.
8. Describe current issues in infectious diseases of the chest.
9. Discuss the current status of interventional procedures of the chest and spectrum of post-treatment changes in the thorax.
10. Discuss the basic strategies for the interpretation and management of mediastinal abnormalities.

Statement of Need
Radiologists and practitioners with an interest in the science and practice of cardiothoracic imaging need to acquire comprehensive knowledge of the diagnosis, imaging, and management of affected patients to achieve excellence in delivery of care.

Target Audience
This course is designed for cardiothoracic radiologists, diagnostic radiologists, pulmonary medicine specialists, cardiothoracic surgeons, fellows and residents with an interest in cardiothoracic imaging. Because of the prevalence of diseases of the chest in the general population, the course will also be of value to internists and family physicians.
